# BATH Soft

## For Soft Smooth Bathing

Protect your bathroom from hard water problems

The Eco-Friendly solution against scale and rust

ABSOLUTELY NO MAINTENANCE  
MAGNETISM NO CHEMICALS  
FREE NO SALT

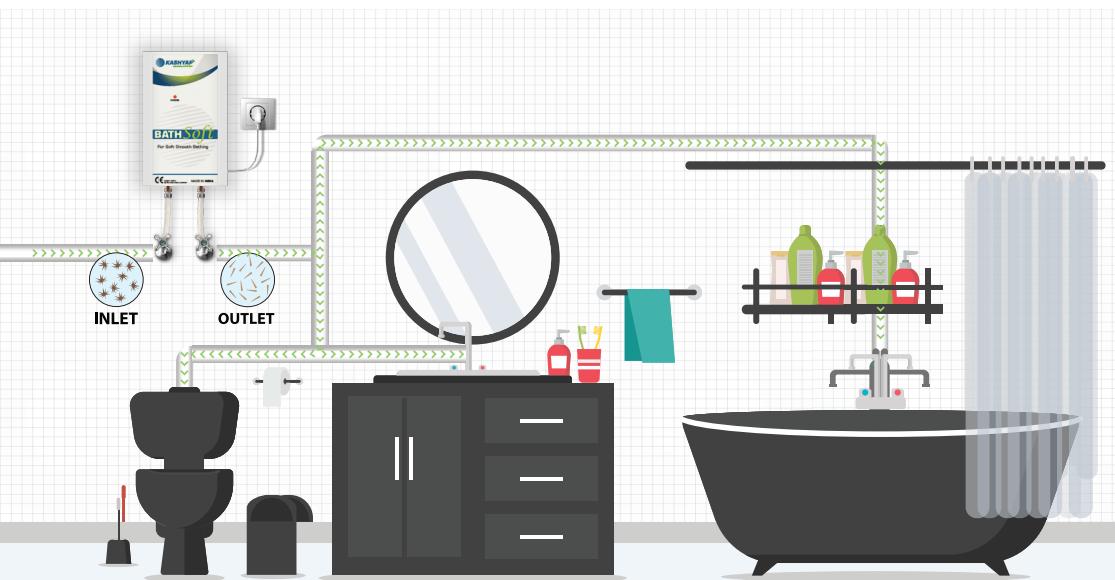

## **WHAT IS HARD WATER?**

Hard water is water that has significantly high amount of magnesium and calcium in it. It forms less lather with soap, making bathing a tough task. It also forms a hard layer of salts on the inside of pipes and appliances. It is estimated that over 80% Indian homes regularly suffer the damages and inconveniences caused by hard water – stained floors, spotted basins, itchy skin, hair fall, a block in the piping system to name a few.

But now, BATH SOFT water softener is here to help.

## **HOW DOES BATHSOFT WORK ?**

Impulse frequency on which the “Kashyap technology” is based , has been explored for decades and intends to cause a physical change in hard water minerals without physically treating water with salt, chemicals, filters, or magnets. The technology uses proprietary frequency distribution impulses (ranging 3-32 kHz) to cause minerals to change their molecular construction and disrupt the natural resolving process. Hard water causing minerals lose their natural bonding ability; the scale and rust build-up is then flushed away with the water flow without requiring any maintenance. All this packed in a Compact size but powerful unit that fits at a point where water enters your bathroom, making every tap in your bathroom a soft water tap.

## **PREVENTS**

New mineral scale from forming, the mineral's molecular construction is turned to rod-shaped structures. These new mineral structures impact other mineral bonds, loosening scale and use the water as a transportation source to flush the minerals out of pipes.

## **REMOTES**

Mineral scale and rust build-up using impulse frequencies (3-32 kHz) to impact and gently loosen existing scale deposits and sanitizes pipes over a period of a few weeks to a few months depending on the existing scale thickness in pipes, on heating elements, etc.

## **PROTECT**

Equipment & machinery surfaces against future corrosion as a result of an electrophoresis process. This process occurs once scale has been removed from the surface, forming a metal-carbonate layer, shielding equipment from future corrosion causing elements.

## **FEATURES OF BATHSOFT**

**Pressure remains unaffected**

**No maintenance easy to install**

**No waste water discharge**

**Eco friendly & efficient**

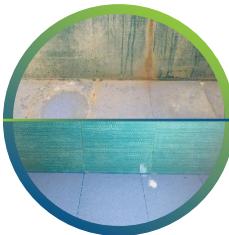

## **BENEFITS OF BATHSOFT**

**Cleaner Skin**  
Makes skin look ultra soft and clean

**Untangled and soft hair**  
Helps Shampoo lather better for hair

**Cleaner Looking Tiles**  
Reduces scaling and staining of tiles

**Shining Fixments**  
Keep them shiny by preventing salt layer buildup

## DIFFERENCE BETWEEN WATER SOFTENERS & KASHYAP ANTI SCALE SYSTEM

<b>Water Softener (Ion-Exchange)</b>	<b>Kashyap (Impulse Technology)</b>
Expensive & needs maintenance	Economical & maintenance-free
Requires daily operation	No operation
High chloride waste water	Eco-friendly green product
Needs more space	Can be installed anywhere
Recurring expense of salt	No salt No chemical
Waste water generation	No Waste Water
High Electric Cost	Works on 24 Volts DC
3 years resin life	2 years replacement warranty & 10 years product life

### Bathsoft water softener technical specifications

Maximum hardness	900 PPM
Flow rate (L/H)	800
Maximum working pressure	3 KG
Maximum operating temperature (Degree C)	65° C
Frequency Range	3-32 KHz
Dimension (HxDxW) in cm	20x12.5x7.5
Total unit weight	1.9 KG

Power Supply: 100-240V 50-60Hz(Input) 24V 625mA(Output)
